

RENEW YOUR INVESTMENT.

Manitowoc's EnCORE program maximizes your investment by rebuilding or repairing your crane and components to extend their life significantly.

> REBUILDS

EnCORE means your crane is rebuilt by factory trained technicians to meet OEM standards. The process includes everything from rebuilding cabs or boom cylinders to updating all systems and renewing electrical harnesses, instruments, drive-lines, hydraulic components and hoses.

Whether your crane requires a repair due to damage caused by an accident, or needs an end of service life rebuild, choosing EnCORE gives you a viable option.

> REMANUFACTURED PARTS

Manitowoc offers an extensive selection of remanufactured parts through the EnCORE program, which include:

- Engines
- Transmissions
- Hydraulic cylinders
- And more!

Each remanufactured part comes with a one-year warranty.

When your crane requires a repair, end of service life rebuild or components overhaul, choosing EnCORE can give your old crane a new lease on life.

> WORLDWIDE

There are EnCORE Certified Partners located throughout the world. To qualify for the EnCORE Partners program, each location has invested extensive resources in training for its technical staff, including a structural engineer and certifications for welders.

Contact Manitowoc Aftermarket for further information on our EnCORE program, details of our EnCORE facilities and Partners or for a rebuild quotation.
